

EXPERIENCE THE WORLD OF METALCASTING AT CASTEXPO'10

PYROTEK—IMPROVING FOUNDRY PERFORMANCE FOR DELEGATES

Sponsored by the American Foundry Society (AFS) and the North American Die Casting Association (NADCA), CastExpo represents the single largest trade show and exposition in North America for metal casters. CastExpo, staged this year, March 20-23 in Orlando, Florida, will continue to be that, but also so much more. In addition to featuring more than 450 companies from across the globe displaying the latest advancements in equipment, technology and services for metalcasting, CastExpo also will unveil a "Cast in North America" Exhibition in which metalcasters (foundries and diecasters) can exhibit their casting capabilities for customers—casting buyers and designers. To accompany these exhibitions, CastExpo will unveil a show-floor Metalcasting Technology Theater for practical, shop-floor presentations for casting buyers and metalcasters.

To complement the show floor, CastExpo runs in conjunction with the annual Metalcasting Congress, where the latest advancements in metalcasting research and practice is presented every year. At CastExpo, the Metalcasting Congress will take on a new look with new additions to the presentation tracks. For metalcasters, some of the world's most renowned experts will be invited to give Keynote Presentations covering all facets of metalcasting. In addition, a new track of practical, shop-floor metalcasting presentations will provide attendees with take-home initiatives to improve their operations. For casting buyers and designers, seminars will be held specifically geared toward their needs, focusing on cost-effective casting design, sourcing concerns and the basics of metalcasting.

As a leading and long established exhibitor, Pyrotek is again proud to bring the latest metal processing solutions to CastExpo and the company's Solutions Team of sales engineers and product specialists will be on hand to help visiting foundrymen understand how Pyrotek can improve their profitability with cost-saving solutions, to improve operating efficiencies, enhance quality, save energy and promote a safer environment. Pyrotek's ISO certified manufacturing locations are strategically located to quickly address your operation's needs.

At the Pyrotek booth #2301, learn more about the company's expansive range of degassing and filtration solutions available, Metallics' line of molten metal transfer pumps, Pyrotek's patented, lightweight, durable, insulating, non-wetting composite RFM® autopour ladles, and an array of metal quality enhancement products and thermocouples designed for longer life and durability.

Pyrotek's Foundry Regional Office in the USA is in Columbia City, Indiana.
